

**BAXAB**

**SEAMLESS COVERING**  
**ULTRA THIN**  
**HIGHLY RESISTANT**

**STRENGTH**

Topcret developed BAXAB which resists stains, scratches and burns. It is 3x stronger than conventional microcements.

**THINNESS**

2-3mm thick, waterproof, seamless covering applied by hand trowel on practically all surfaces.

**DESIGN**

Design your new spaces or refurbish existing ones, with more than 40 colours, to create a unique & exclusive look.

**TO BECOME AN EXCLUSIVE TOPCRET PARTNER, CONTACT: [info@topcret.com](mailto:info@topcret.com)**

**Baxab** is a completely new covering technology.

Highly resistant to cracks, stains and scratches. Nothing so thin is so hard.

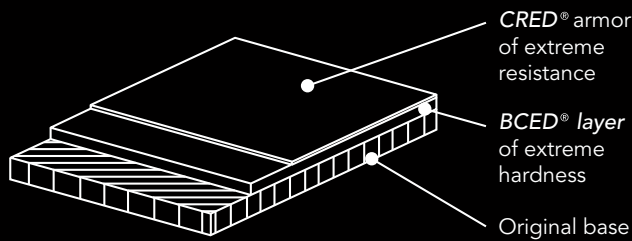

Unlike any other micro-coverings, its high resistance allows an intensive and prolonged use, not only in dwellings but also in commercial stores, public spaces and other high foot transit areas.

Available in a wide color palette, without joints and with its trowel handmade finishing, **Baxab** achieves surfaces of great quality and beauty.

With only 3 mm thick and its fast application time, it is ideal for remodeling works since it does not require removing existing floors or changing openings nor bases. Open to foot transit after a few hours of application. It is totally waterproof, so it can be applied on kitchens, bathrooms and any wet area.

## THE NEW TECHNOLOGY BEHIND BAXAB.

With similar aspect to other micro-coverings, **Baxab** represents a technological leap. It is the combination of two new and unique materials, developed by Topcret, which achieves levels of resistance never reached by other products of the segment.

The new technology developed by Topcret includes the application of a first extreme hardness **BCED®** layer over the existing surface. This inner layer is highly resistant to pressure and breaks, creating a solid, stable and long-lasting coating. It is applied with a trowel following a strict procedure and requires less than 24 hours of drying.

The final finishing is also the exclusive **CRED®** Armor of extreme resistance. An innovating material that resists scratches, stains and burns. This resin-base layer is also applied with a trowel and it allows a glossy or matte finishing depending on customer preference.

Overall, **Baxab** technology achieves a highly resistant surface and a decorative, sophisticated, noble and durable finishing, with a very similar installation technique compare to that of others micro-coverings.

## LABORATORY TESTS AND CERTIFICATIONS.

Topcret has tested the **Baxab** technology under exhaustive external technologic certifications to determine the extent to which this product is highly resistant.

Resistance to adherence, UNE-EN 13892-8:2003	>3,3 N/mm <sup>2</sup>
Surface hardness, UNE-EN 13892-6:2003	120 N/mm <sup>2</sup>
Transmission index of liquid water (permeability), UNE-EN 1062-3:2008	0,01 kg/m <sup>2</sup> h <sup>0,5</sup>
Determination of flex properties, UNE-EN ISO 178:2003	1,3 kN/mm <sup>2</sup>
Impact resistance, UNE-EN ISO 6272:2012	>14,7 Nm
Drop height where the first fissures are observed:	A 1500 mm
Diameter produced at this height:	9,5 mm.
Resistance to BCA wear, UNE-EN 13892-2: 2003	30 μm
Determination of chemical resistance, UNE-EN 13529:2003 No defects up to: 7 days for chlorine; 1 day for bleach, olive oil, alcohol, viakal and vinegar; 6 hours for lemon juice.	

Due to printing process, the colors on this chart are illustrative only and the final color can vary upon installation.
